

# Valley Mall Boulevard Interchange

November 2010

## Temporary Roundabout Traffic Movements: Getting To and From I-82

### From I-82

### To I-82

All drivers must yield to both lanes of traffic already in the roundabout.

## How do I drive a multi-lane roundabout?

**Choose your lane.** You choose your lane in a multi-lane roundabout the same way you would in a traditional multi-lane intersection. To go straight or right, get in the right lane. To go straight or left, get in the left lane and follow the left lane around the roundabout.

**Look left and yield to both lanes of traffic in the roundabout.** In a multi-lane roundabout, you must yield to both lanes of traffic. Once a gap in traffic appears, merge into the roundabout and proceed to your exit. Look for pedestrians and use your turn signal before you exit. If there is no traffic in the roundabout, you may enter without yielding. Don't forget to yield to pedestrians.

## What do I need to know while driving a roundabout?

- Do not stop within the roundabout.
- Do not change lanes within the roundabout.
- Do not drive next to large trucks in the roundabout.
- If an emergency vehicle approaches, pull to the right before entering the roundabout. If in the roundabout, continue to your exit and pull to the right.
- Use your turn signal before exiting the roundabout.

### What do the signs in and near roundabouts mean?

The lane choice sign shows drivers which lanes are used for right turns, straight through travel, left turns and u-turns.

The yield sign tells drivers to yield to traffic already in the roundabout.

Drivers should note that trucks may take up both lanes in a roundabout.

Cyclists can travel through roundabouts with vehicles, or they can walk their bicycles through pedestrian crosswalks.

Roundabouts are designed for speeds between 15 and 25 mph.

Drivers should look for pedestrians or bicyclists in marked crossings before entering or exiting a roundabout. Pedestrians can cross roundabouts using marked crosswalks. Triangular center islands between traffic lanes allow pedestrians a safe place to wait if they cannot cross all traffic lanes at once.
